#19 varieties

Close inspection of a number of the #19 patches has identified several varieties:

19a - Date is floating in alligators mouth when compared other varieties.

19b – Heavier font, date is positioned more to the left and the lining of the alligator mouth is more pink than the 19a. Noticeable space between perimeter wording and embroidered edge. “Silver Springs” touches bottom of the alligator.

19c – Alligators lower jaw is skinner than other varieties, date is shifted to the right. No separation between “Silver Springs” and perimeter wording.
